

# Engage students, enrich learning and demonstrate improvement.

Highlight improvement over time and across activities while empowering students and faculty. Anthology Portfolio (formerly Chalk & Wire) is designed to capture the student journey on and off the campus, with embedded and LMS integrated assessment activities to support the easy capture and measurement of student learning outcomes.

## Key Capabilities:

Unlimited and customizable portfolios

Innovative results analytics

Flexible permissions

Goal and activity tracking

Powerful LMS integrations

Enhanced experiential learning

## Anthology Portfolio in Action

"[Portfolio] was significant during our CAEP Accreditation visit and state report during 2017, and I honestly do not know how we would have collected all of the unit-wide data for these reviews without the system in place. Having the ability to attach assessments to our field placements has made this a simplified process so that all of our supervisors (even those that are not tech savvy) can effortlessly enter in their interns' evaluations each semester. [Portfolio] has continued to provide our college with efficient data collection and reporting, playing a crucial role in our accreditation and program reviews."

### Lisa Peterson

Accreditation Coordinator,  
University of South Carolina-Columbia

### **Streamline authentic assessment processes**

Flexible, advanced assessment options not only fit but improve your existing processes and workflows. Help students make meaning of their assignments, learning activities and experiences as they document, reflect and review feedback throughout their academic journey.

### **Display growth and success with shareable portfolios**

Guided learning and robust feedback tools help students make meaning of their assignments, reflect on feedback, document skill development and highlight achievements throughout their academic years and beyond. Staff can easily collect and curate teaching achievements and activity with faculty portfolios, as well.

### **Assessment, data and templated assistance**

Use real-time tracking to easily identify and support student learning gaps or concerns and make program improvements. Aggregate and disaggregate templated, custom and exportable reports to provide evidence of outcome achievement and efforts to improve teaching and learning while supporting programmatic accreditation efforts.

### **Manage outside-the-classroom learning**

Track experiential learning across all types of student placements, whether it's a single afternoon session in the field or clinic, or a year-long internship. One-click overviews show in-progress and completed placements, while placement coverage reports offer detailed insights, including diversity exposure where necessary. Easily gather feedback from external reviewers, encourage student reflection of experiences, track and confirm completion hours, and survey a variety of stakeholders from a single tool.

### **Powerful integrations save you time**

Designed to integrate with other solutions, Portfolio enhances onboarding and assessment activities. Seamless LMS integration supports student artifact submission and grade passback. Robust bulk and API import options, plagiarism detection and file imports (Dropbox, Google Drive and OneDrive) ensure compatibility with your existing tools. Portfolio is also an approved edTPA® provider that pre-loads the system with current handbooks and tasks so your candidates can more easily prepare their responses and transfer their edTPA® to Pearson.
